Painting II continues the skill development of acrylic and/or oil painting with emphasis on representational imagery. Students will work from still lifes, landscapes, portraits, and other subjects to study how light and shadow, color, texture, atmospheric conditions, spatial depth, and other compositional elements can be applied to render what they see in a naturalistic manner. Historical and contemporary methods of paint application will be explored. Field trips may be required.

ASTRO 010 - Introduction to Astronomy 3.00 Units

Grading: L **|** ***Advisory Level*** **—** ***Read:*** *3* **|** ***Write:*** *3* **|** ***Math:*** *3*

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This is an introductory science course for non-science majors covering topics of modern Astronomy. It highlights pivotal aspects in the history of Astronomy such as its distinction and further separation from Astrology. It lists the physical processes governing the origins of a star system and indicates the causes of the apparent motion of sky objects and cyclic sky events. The sources of periodical astronomical events such as phases of the moon, solar and lunar eclipses, meteor showers, and seasons are identified and related via the fundamental laws of physics. The astronomical tools of photometry and spectroscopy are introduced for their indispensable role in analysis towards the detection of planets around other stars, the investigation of dark matter and dark energy, and the ongoing search for extraterrestrial life. Additional topics include the origins of galaxies, large scale structure, and a full description of the Big Bang theory.

Prerequisite: ASTRO 010 with C or better or concurrent enrollment

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This is an introductory laboratory course in Astronomy designed for non-science majors. It incorporates substantial number of contact hours at the Montgomery Hill Observatory, making use of the state of the art telescopes, CCD cameras, and various adapters for cell phones. Students will identify constellations and asterisms, measure the apparent motion of planets and stars, and investigate the geology of terrestrial objects throughout the solar system. A series of lab exercises will demonstrate main behaviors of light and its interaction with matter. This course will cover the different stages of stellar evolution, making use of computer simulations to illustrate changes in size and energy output of stars, as they age. Course work will conclude with explorations on large scale structures such as galaxies, clusters of galaxies, and the expanding Universe.

This is an introductory course focusing on the main physical processes governing the solar system formation and its evolution. It introduces the scientific methodology adopted by astronomers to establish self-consistent models of celestial processes. It highlights the latest achievements in space exploration on planets and their moons, and other minor bodies such as asteroids, comets, and dwarf planets. Special consideration is given to current research focusing on origins of life and the search for evidence of extraterrestrial life, past or present.

This course introduces students and entry level automotive technicians to the automotive electrical system. The course covers DC electrical theory, magnetism, Ohm's law, series and parallel circuits, passive components, and system dynamics. Students learn to calculate and measure voltage, resistance and current in theoretical and live circuits, build and test working models of typical automotive electrical systems using table top components and industry specific simulators, and practice diagnosis and repair procedures on a variety of vehicles. Students will also develop an understanding of modern electrical test equipment, such as DMMs, GDMMs, and DSO's, and industry standard troubleshooting and repair procedures. This course will prepare students for the ASE A6, Automotive Electrical Systems, certification examination.

Prerequisite: CHEM 001A or equivalent and MATH 013 with C or better , or placement by multiple measures

Recommended: Recently completed biology lecture and lab course with a grade of B or better in high school or college

Transfer Status: CSU | Degree Applicable: AA/AS

This is the first course in a two term majors-sequence for students preparing for careers in the sciences, science education, biochemistry, or medicine. This lecture and laboratory course emphasizes the nature of science and the scientific method, and fundamental principles and theories in biology at the molecular and cellular level. Topics will include biological chemistry, cell structure and function, bioenergetics, cell reproduction, Mendelian inheritance, molecular genetics, biotechnology, evolution of the genome, and some biochemical laboratory techniques for proteins and DNA. Field trips may be required.

Thinking about being a scientist? Consider a major in Biology! The goal of this course is to introduce the wide variety of science pathways, careers in the Bay Area and strategies to help you do well in your future laboratory classes and beyond. This class includes field trips to research institutions such as San Jose State, opportunity to present your own research and the chance to build relationships with fellow students heading down the same pathway to a science career. You are invited to join Biology professors and student tutors in a supportive community that will guide you through your time at Evergreen Valley College and beyond.

BIOL 062 - Plants and Human Welfare 3.00 Units

Grading: L **|** ***Advisory Level*** **—** ***Read:*** *3* **|** ***Write:*** *3* **|** ***Math:*** *2*

Transfer Status: CSU | Degree Applicable: AA/AS

Students are introduced to the world of plants and their ecological importance to humans. Plants provide the oxygen we need to breathe and the food we need to eat. Students will learn about plant anatomy, flowers and fruits, genetic modification of plants, nutrition, agriculture, gardening, plants for material, medicinal plants, poisonous plants, algae, fungi and diseases. Discussions include the impact of plants on the development of civilizations, the need for conservation, and the role of plants in the total environment.

BIOL 098 - Directed Study in Biology 9.00V Units

Grading: O **|** ***Advisory Level — Read:*** *3* **|** ***Write:*** *3* **|** ***Math:*** *3*

Prerequisite: Project approval is required by sponsoring faculty and division dean.

Recommended: Any college level biology course or equivalent

Transfer Status: CSU | Degree Applicable: AA/AS

Individual or small groups of students who would benefit from independent study under the direction of faculty members in specific or related disciplines may develop individualized learning contracts designed to enhance their individual instructional programs. The students and the faculty member in consultation with the Division Dean will determine appropriate learning objectives and activities as well as the number of units to be earned. Instructions and the Learning Contract forms are available in the Division office. Repeatable to a maximum of 9 units across all disciplines.

Prerequisite: CHEM 015 and MATH 013 or MATH 016, all with P or C grade or better, or placement by multiple measures

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This is the first course in general chemistry with lab, for science and pre-professional majors. It covers basic chemical principles: nomenclature, atomic structure, quantum theory, molecular structure and bonding, periodic properties, chemical reactions, stoichiometry, thermochemistry, states of matter, gas laws, solutions, oxidation-reductions, and molecular equilibrium. The role that chemistry plays in everyday life, industry, and human welfare is emphasized.

This course is the second semester of a one-year college level general chemistry sequence. The content includes thermodynamics, chemical kinetics, chemical equilibrium, electrochemistry, coordination compounds, nuclear chemistry, and organic chemistry. The laboratory emphasizes qualitative and quantitative analyses of inorganic compounds and introduces electronic instrumentation. The course is required for students majoring in physical and biological sciences and pre-professional majors such as pre-medicine and dentistry. The course also completes the basic chemistry requirements for students majoring in chemical and materials engineering.

The first course of a two-semester sequence in organic chemistry with emphasis on structure, reaction mechanisms, and their kinetics. Topics include nomenclature, stereochemistry, mechanisms, reactions, and spectroscopic studies of organic compounds. Problem-solving techniques will be used to elucidate mechanistic, structural, and stereochemical features of reactions and molecules. Lecture and laboratory will cover synthesis, isolation, purification, elucidation, and identification of organic structures, instrumental methods and data interpretation.

This is the second course of a two-semester sequence in organic chemistry designed to follow Chemistry 012A. Topics include nomenclature, stereochemistry, mechanisms, reactions, and spectroscopic studies of aliphatic and aromatic alcohols, aldehydes, ketones, acids, and other classes of organic and biological compounds (such as amino acids, proteins, and nucleic acids). Problem-solving techniques will be used to elucidate mechanistic, structural, and stereochemical features in chemical reactions. Lectures and laboratory methods will focus on synthesis, isolation, purification, elucidation, and identification of organic structures as well as instrumental methods and data interpretation.

Prerequisite: MATH 013 with P grade or placement by multiple measures

Recommended: MATH 013 may be taken prior or concurrent with CHEM 015.

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This course covers the fundamentals of modern inorganic chemistry with emphasis on atomic structure, chemical bonding, chemical formulas, nomenclature, equations, stoichiometry, gas laws, solutions and related topics. It is intended primarily as a preparation for the Chemistry 001A and 001B sequence. The central nature of chemistry among other branches of science is stressed, and examples of the important role that chemistry plays in our lives are presented.

This course is a continuation of Introductory Chemistry with emphasis on the basic principles of organic and biological chemistry. It is designed for allied health and industrial technology majors. Topics that will be covered will include hydrocarbons, alcohols, ethers, carbonyl compounds, carboxylic acids, esters, and amines. It will also include an introduction to the structures and properties of carbohydrates, lipids, and other biopolymers.

Transfer Status: CSU | Degree Applicable: AA/AS

This course introduces students to the field of Data Science through computational and inferential thinking. Given data arising from some real-world problem, students will learn the fundamental skills in computer programming and statistical inference needed to analyze that data so as to understand and solve that problem. The course also addresses social issues surrounding data analysis, such as privacy, security, and design.

This course surveys effective study skills and methods by contrasting ineffective study habits with techniques that maximize learning and memory. Emphasis is on promoting healthy changes in lifestyle that manage stress, improve health and overall well-being. Techniques to change behavior such as setting goals, managing time, increasing concentration, and controlling procrastination are practiced. Lecture topics include effective listening and note-taking skills, textbook reading, marking and vocabulary systems, memory strategies, and research paper methods using library resources. This course orients students to transition to college course expectations and procedures.

This course is an introduction to the principles of macroeconomic theory. It explains the forces affecting national economies such as variations in money and credit, income, output, productivity, employment, prices and inflation. It also examines monetary and fiscal theories, explains the role the government plays in the U.S. and other national economies as a result of monetary and fiscal policies and through the exercise of its regulatory powers. The course also provides an overview of how changes in inflation rates, interest rates, and the international value of the dollar reflect variations in the economy. This course provides an overview of the effects the government has upon businesses and households as a result of its taxation and spending policies.

Microeconomics focuses on economic behavior of individual economic units such as consumers, firms, and resource owners. It examines the market system as a means of solving the problems in the production and distribution of goods and services in a society. An analysis of the effectiveness of the price system in providing the society with an equitable distribution of goods, services and income is featured. It explores some of the more urgent micro-economic problems such as monopoly power of big business and big unions, government regulations and consumer protection, the energy crisis, taxes and welfare.

Transfer Status: CSU | Degree Applicable: AA/AS

This course introduces students to the foundations and practices at the heart of the differences between the online and traditional classroom. Students will gain proficiency in the unique qualities and perspectives of online teaching. It will also walk students through the pertinent federal, state, and local regulations impacting online teaching, to set them on a path to designing successful online courses. Central to the design skills that students will gain is the effective use of digital tools that form the online learning management system (LMS). Digital tools that are integrated into the LMS are also covered, as well as other tools that cover basic graphic design as well as audio and video production that enhance student learning and equitable access for all students.

Transfer Status: CSU | Degree Applicable: AA/AS

This course teaches the skills and knowledge necessary to create effective online learning environments using the current Course Management System (CMS). Students will explore examples of the content, learn to navigate the interface, add tools and content, and perform basic course management functions. This course also integrates the Course Design Rubric to train faculty how to not just build courses in the CMS, but how to build quality courses. Students will learn to customize their courses, focusing on course design, interaction and collaboration, assessment, and learner support. By the end of the course they should have an in depth understanding of Canvas tools and be ready to begin using this CMS for their classes.

Students study the African-American experience in America as viewed through the literary works of African-American authors from slavery to 1930. The course is designed to analyze the various and unique social scientific approaches — namely the historical, the psychological, the sociological, the artistic and the philosophical — that African-American authors employ in exposing, exploring and, in general, informing an oftentimes unreceptive reading audience.

ENGR 010 - Introduction to Engineering 3.00 Units

Grading: L **|** ***Advisory Level*** **—** ***Read:*** *3* **|** ***Write:*** *3* **|** ***Math:*** *3*

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This course provides an in-depth exploration of engineering disciplines, the diverse roles engineers play in various industries, and educational pathways. The course equips students with strategies to optimize their academic success, introduces problem-solving tools, and highlights the engineer's connection with society and ethical responsibilities. It also focuses on improving communication skills relevant to engineering professions. Additionally, the course offers a dynamic, hands-on exploration of engineering, emphasizing computer-aided problem-solving and design projects. It provides a holistic learning experience, encompassing both technical and non-technical skills, with a strong focus on teamwork and engineering problem analysis throughout the design process.

This course covers the principles of engineering drawings in visually communicating engineering designs and an introduction to computer-aided design (CAD). Topics include the development of visualization skills; orthographic projections; mechanical dimensioning and tolerancing practices; and the engineering design process. Assignments develop sketching and 2-D and 3-D CAD skills. The use of CAD software is an integral part of the course.

Students learn the fundamentals of computer assisted problem solving, as it applies to the solution of engineering problems. The four major themes of this course are algorithm development, efficient programming/modeling, PC device interfacing, and practical and user friendly pre/post processing techniques. The C++ programming language is used to obtain solutions to various engineering problems. Object oriented programming using subjects such as classes, pointers, inheritances, dynamic allocation of memory space, and standard template libraries are emphasized.

Mechanical, thermal, electrical, magnetic and chemical properties of materials are studied. The effect of atomic and crystal structure and various bonding mechanisms on the above properties are discussed. Diffusion and phase analysis in various materials, defects, and failure in materials including the effect of heat treatment on the strength of materials are also investigated. Various laboratory experiments such as impact, tensile and compression, torsion, fatigue, corrosion, thermal conduction and expansion, electrical conduction, magnetic strength, composite structure, rubber and polymer resilience, and photomicrograph are conducted to provide enhanced knowledge of material properties.

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This introductory engineering mechanics course is essential for students majoring in mechanical engineering or civil engineering, as it lays the foundation for most upper-division coursework. The course covers fundamental concepts, including the properties of forces, moments, couples, as well as the analysis of two- and three-dimensional force systems on engineering structures in equilibrium. It explores topics such as truss and beam analysis, distributed forces, shear and bending moment diagrams, center of gravity, centroids, friction, and area and mass moments of inertia.

1. ENGR 010 or ENGR 010A and ENGR 010B 2. A programming course

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This course is fundamental for electrical engineering and computer engineering majors, as it lays the foundation for most upper-division coursework in these fields. It provides a comprehensive exploration of electrical circuits, emphasizing the application of circuit laws and network theorems through analytical techniques. The course encompasses the analysis of circuits containing various components, such as resistors, capacitors, inductors, and operational amplifiers, in both DC and AC scenarios. Topics covered include the natural and forced responses of RLC circuits, phasors, AC power calculations, power transfer, and energy concepts. Furthermore, students will gain exposure to the construction and measurement of electrical circuits, becoming proficient in using electrical testing and measurement instruments like multimeters, oscilloscopes, power supplies, and function generators. They will also learn to work with circuit simulation software and interpret both measured and simulated data based on circuit analysis principles, catering to DC, transient, and sinusoidal steady-state conditions. Practical aspects, including component value tolerance and non-ideal characteristics of laboratory instruments, will be

addressed, along with the construction and measurement of basic operational amplifier circuits.

This is an interdisciplinary course in which students examine the interaction between human societies and the environment. Students will study important physical and biological properties necessary for life on Earth. They will explore major issues that are bound to affect the future of humans on our planet including population growth, resource exploitation, pollution, climate change, and the loss of biodiversity. Students will also consider environmental policies and the prospects for a sustainable future. Field trips may be required. ENVIR-010 meets general education requirements for science with a lab and can be counted as either a life science or as a physical science course.

ETH 011 - Ethnic Images in Film 3.00 Units

Grading: L **|** ***Advisory Level — Read:*** *3* **|** ***Write:*** *3* **|** ***Math:*** *0*

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This course is an introductory study of the relationship between film and culture. It critically examines film as an active tool of cultural production in the U.S., interrogating dominant portrayals as well as multiple perspectives across marginalized communities. Through an interdisciplinary and intersectional approach, it explores how power is conveyed, perpetuated, and disrupted in the dynamic images representing race, ethnicity, culture, class, gender, sexual orientation, age, religion, and disability across American film.

Grading: L **|** ***Advisory Level*** **—** ***Read:*** *3* **|** ***Write:*** *3* **|** ***Math:*** *0*

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This course focuses on the Chicanx and their relation to U.S. society. It will address some critical areas of the Chicanx experience in terms of identity, economics, labor, immigration, stereotypes, religion, and police-Chicanx conflict. In order to provide a real-world analysis of the contemporary role of the Chicanx in society, this course will include a Service-Learning component with a focus on the Chicanx community of San Jose. A central objective of the course is to base both skill development and content on issues that are of personal and academic interest to the student. The ultimate objective is to use

this analysis to come up with strategies for addressing the needs of the Chicanx and other communities with similar circumstances.

This course provides students with a basic theoretical background to critically situate Vietnamese American lives within the contexts of racialization, white supremacy, and settler colonialism. It draws upon scholarly, literary, and artistic production across disciplines and by multiple agents, including Vietnamese Americans, to expose and interrogate the orchestration of war and militarism, coerced displacement, global capitalism, and racialization. It also explores questions of gender, sexuality, class, religion, generation, transnationalism, community-building, and social justice political activism that intersect with Vietnamese American lives and creative expression.

This course analyzes the heritage and development of California from its beginnings with emphasis on the geography, natural resources, economic, social, ethnic, multicultural, and political forces that shaped the modern state. The Golden State's phenomenal growth and multicultural changes are emphasized. We will examine the Native American, Spanish, Mexican, and American periods. We will investigate the complex and sometimes violent process of populating, repopulating, and settling this region through immigration on the western edge of the American frontier. We will explore the cultural construction of the "California Dream" and evaluate how different groups have responded to its promises of opportunity and social renewal. The often-ignored voices of women, minority ethnic, and gender groups are an integral part of the course's narrative. Lastly, we will examine the historical origins of important issues confronting California today. This course provides students with advanced skills training in legal analysis, legal writing, and the use of electronic legal research using databases such as Westlaw and Lexis. Students will be presented with complex legal problems and will learn how to analyze them using the IRAC method (Issue, Rule, Analysis, Conclusion). Students will learn to present their legal analyses in professional quality written documents, including trial court pleadings, research memoranda, motions, client opinion letters and demand letters.

Grading: L **|** ***Advisory Level*** **—** ***Read:*** *3* **|** ***Write:*** *3* **|** ***Math:*** *0*

Transfer Status: CSU/UC | Degree Applicable: AA/AS

This is an introductory course in informal fallacies and critical reasoning. The course will focus on critical thinking strategies and skills, the elements of an argument, distinctions between deductive and inductive logic, and comparing the strength of arguments. Students will study causal relations and scientific, statistical, moral, and legal reasoning. The course will present techniques for analyzing arguments used in political rhetoric, advertisements, editorials, scientific claims, social media and social commentary. There is a strong emphasis on the written expression and the application of critical thinking in a series of presentations, compositions, or a term paper.

PHYS 001 is an introductory investigation into the topics of physics for non-science majors. Topics include the fundamentals of the scientific method, mechanics, forces, conservation of momentum and energy, rotational motion, gravity, atomic physics, thermodynamics, waves (sound and EM), electricity and magnetism, optics, relativity and nuclear physics. The course content incorporates hands-on laboratory activities, in-class physical demonstrations, journaling, outdoor activities, homework, and a group project.

This is the first course in the calculus-based physics sequence for students majoring in mathematics, physical sciences, engineering, and computer science. Specific topics include kinematics, Newton’s laws of motion, work and energy, momentum, rotation, simple harmonic motion, universal gravitation, fluids, and mechanical waves. Practical applications of these subjects are discussed in class and incorporated into group projects developed along the term. A problem solving approach, using mathematical expressions and symbols, is routinely employed in lectures and homework to illustrate the laws of physics governing real world situations.
